1. client-side screenshot for **your** design:

2. Body and script code for client side:

```
<body>
.
.
.
<script>
var HOST = location.origin.replace(/^http/, 'ws');
var ws = new WebSocket(HOST); //#A
var range = document.getElementById("myRange");
.
.
.
.
</script>
</body>
```

3. JavaScript code for server-side (**websocket part only**):

```
const SocketServer = require('ws').Server;
const wss = new SocketServer({ server });
....

wss.on('connection', function(ws){
....

....

....

....

}
```

4. NodeMCU (Arduino code)(**the part of on messege event only**)

```
case(WStype_TEXT):
int value;
…
analogWrite(D1,value);
break;
```

5. screenshot for Arduino serial Monitor:
